Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

None of the prior art made of record teaches or suggests a method of processing a primitive for potential display on a display device having a plurality of pixels, the method comprising:

determining if the primitive intersects at least a predetermined number of pixel fragments on the display device, the predetermined number being no less than one; and

culling the primitive as a function of whether the primitive intersects at least the predetermined number of pixel fragments on the display device, the primitive not being raster processed if culled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

-The closest prior art, Duluk, JR. et al (US 2002/0196251) disclose a method and apparatus for culling in a graphics processor including the subpixel cull operation, which takes the remaining primitives (which are partly or entirely visible), and determines the visible fragments. Duluk, JR. et al further disclose (Fig. 14) the Z cull unit (9012) determines whether a primitive covers a particular sample point (i) by comparing the

sample point x coordinate, X_{sample} , with the $X_{leftSub}$, and $X_{rightSub}$, values computed by the Subrasterizer. However, Duluk, JR. et al fail to disclose the claimed "culling the primitive as a function of whether the primitive intersects at least the predetermined number of pixel fragments on the display device, the primitive not being raster processed if culled."

-Huang (US 2004/0196281) discloses (Fig. 1) how data parameters for graphics primitives such as triangles not being processed can be rejected or culled prior to transfer on the data pipeline. However, Huang fails to disclose the claimed "culling the primitive as a function of whether the primitive intersects at least the predetermined number of pixel fragments on the display device, the primitive not being raster processed if culled."

-Greene (6,636,215) discloses rendering a scene with box culling for maximizing culling efficiency and minimizing computation and memory traffic (column 11, lines 65-67).
